

The Water Cycle Science - Precipitation

The water cycle describes what happens to water as it moves around the planet. There are four steps in the water cycle...

evaporation precipitation condensation accumulation

- When water falls from the sky, we call it _____.
- When the water on the ground gathers together into puddles, we call it _____.
- When the sun heats up water on the ground, causing it to go up into the air, we call it _____.
- When water in the air cools down and becomes clouds, we call it _____.

The Water Cycle Science - Precipitation

Precipitation

Question: What will happen when I put a lot of food coloring into a dollop of shaving cream that's floating in a cup of water?

My hypothesis, or guess is: _____

Materials needed:

Write or draw your observations (what happened?)
